BRAVECTO[®]
injectable

ONE-OF-A-KIND PROTECTION AGAINST FLEAS AND TICKS AND DISEASES THEY CARRY

Slow-dissolving fluralaner crystals in the formulation provide continuous protection for 12 months.

One small dose of **BRAVECTO**[®] injectable provides enough fluralaner to deliver effective flea and tick protection for 12 consecutive months.

Revolutionary injectable uses a trusted ingredient.

BRAVECTO injectable uses a new, breakthrough crystal formulation of an active ingredient called fluralaner. The injection maintains an effective level of fluralaner longer than oral and topical formulations. Fluralaner has proven its safety and efficacy since launch for over 10 years.

Easy to administer injection.

Injecting the medication is similar to giving a vaccine. We administer a small dose of medication under the skin at your regular vet visit, once a year.

BRAVECTO injectable can be used alongside other medications.

Rest assured that **BRAVECTO** injectable is not contraindicated for use with other medication. During clinical field testing, no interactions between the veterinary medicinal product and other routinely used veterinary medicinal products were observed.^{1,2}

It is better to protect from infestations than to treat them.

Year-round protection against fleas and ticks helps avoid the emotional and financial burden of treating an infestation. With **BRAVECTO** injectable your dog is receiving 12 months of flea and tick protection from a single low dose injection. This removes the risk of forgetting to dose, making sure your dog can go on ectoparasite-risk-free adventures everyday.
